

FOLDING DOORS

Folding door systems are designed to create wide, continuous openings that seamlessly connect indoor and outdoor spaces.

Through multiple panels that fold and stack laterally, configurations of up to six panels can achieve openings of up to 18 feet, transforming living areas while maximizing visual openness and functional flow.

This architectural solution brings together system precision, structural integrity, and controlled performance to deliver generous spans without compromising airtightness, insulation, or long-term reliability.

- MADE IN EUROPE
- HIGH PERFORMANCE VINYL SYSTEMS FROM REHAU
- ROTO HARDWARE

PERFORMANCE HIGHLIGHTS

- Configurations of up to six panels with openings reaching 18 feet
- Expansive, uninterrupted transitions between interior and exterior spaces
- Precision-engineered perimeter sealing for strong thermal and acoustic control
- Smooth, balanced multi-panel operation
- Structurally stable system designed for long-term performance
