

LIFT & SLIDE DOORS

Lift & Slide door systems are designed to accommodate large glass panels while maintaining smooth, controlled operation and strong thermal performance.

Through a lift-assisted mechanism that reduces friction during opening and closing, heavy door panels move effortlessly along precision-engineered tracks, allowing expansive glazed openings while preserving structural stability and reliable sealing.

This architectural solution combines structural strength, compression-sealed technology, and advanced profile engineering to deliver expansive openings, excellent energy efficiency, and long-term reliability in demanding residential applications.

- MADE IN EUROPE
- HIGH PERFORMANCE VINYL SYSTEMS FROM REHAU
- ROTO HARDWARE

PERFORMANCE HIGHLIGHTS

- Large glazed panels designed for expansive architectural openings with configurations allowing spans of up to 10 meters
- Lift-assisted sliding mechanism enabling smooth and controlled movement of large door panels
- Compression-sealed system engineered to enhance thermal and acoustic performance
- Thermally broken threshold designed to improve energy efficiency and interior comfort
- Structurally stable system engineered to support large glass surfaces and long-term performance
