

TILT & TURN WINDOWS

The Tilt & Turn system is a European-engineered solution developed for projects that require operational flexibility, envelope performance, and long-term durability. This inward-opening configuration combines secure tilt ventilation with full side-hinged access in a single unit.

In tilt mode, the sash inclines inward from the top to allow controlled airflow while maintaining security and weather resistance. In turn mode, the unit pivots fully inward, enabling maximum ventilation and safe interior cleaning access, ideal for multi-storey applications.

Available in both contemporary straight profiles and softer traditional contours, this precision-built system delivers controlled ventilation, structural integrity, and high-performance building envelope reliability.

- MADE IN EUROPE
- HIGH PERFORMANCE VINYL SYSTEMS FROM REHAU
- ROTO HARDWARE

PERFORMANCE HIGHLIGHTS

- Dual-function operation: secure ventilation and full opening in one system
- Steel-reinforced profiles for enhanced structural stability
- Manually inserted EPDM gaskets for superior long-term weather sealing
- Engineered glazing configurations starting at 4 mm glass thickness to support enhanced durability, thermal efficiency, and acoustic performance
- Inward-opening design for simplified cleaning and maintenance access
