

SLIDING DOORS SYNEGO

The SYNEGO SLIDE system combines smooth, effortless operation with advanced sealing technology and excellent thermal performance. Its innovative sliding mechanism allows door panels to open and close with minimal effort, while its space-efficient design creates a seamless connection between indoor and outdoor living spaces.

Unlike conventional sliding systems, SYNEGO SLIDE features a unique closing mechanism that presses the sliding sash evenly against the frame. Combined with a continuous perimeter seal, this technology delivers excellent airtightness and watertightness, even under demanding weather conditions.

The system provides structural stability, effective thermal insulation, and enhanced acoustic comfort. Its durable, low-maintenance design combines precision engineering with everyday convenience, making it a versatile solution for modern residential projects.

- MADE IN EUROPE
- HIGH PERFORMANCE VINYL SYSTEMS FROM REHAU
- ROTO HARDWARE

PERFORMANCE HIGHLIGHTS

- Innovative sliding mechanism for smooth, effortless operation
- Space-efficient design connecting indoor and outdoor living spaces
- Advanced perimeter sealing for excellent airtightness and watertightness
- High thermal insulation with U-values as low as 0.97 W/(m²K).
- Acoustic insulation up to 44 dB and enhanced security up to Class RC2
- Durable, low-maintenance five-chamber profiles with steel reinforcement
